Advanced MRI Detection of Blast-Related Traumatic Brain Injury in US Military Personnel

David Brody, M.D., Ph.D.
Assistant Professor
Department of Neurology
Washington University School of Medicine

Research Abstract

Areas of active research include investigations of amyloid-beta and tau pathology in the setting of traumatic brain injury, and advanced neuroimaging methods in traumatic brain injury. The group has worked closely with Department of Defense collaborators and has extensive experience with both military and civilian TBI patients. Dr. Brody maintains a well-funded, active laboratory in which a large volume of experimental traumatic brain injury experiments are performed.
